RE: Casella Recycling

Per Danielle at Casella:

- 1) The last pick up was 540 pounds (full). Weight varies with materials deposited. Ex. Cardboard could fill the container but not weigh as much. Usually at least ½ or totally full.
- 2) The materials are then taken to a sorting facility in Scarborough where any contaminants are removed.
- 3) The uncontaminated material is then sent to a processing facility in Western U.S. or Canada where it is then prepared for making new product.
- 4) They have not dealt with China for at least four years. The reason China stopped was because they were being shipped loads which might contain contaminants in which case all had to be disposed of.
- 5) The cost per month for Whispering Sands for the recyclable pick up is \$136.74
